Beginning with the fundamentals of carpentry work within a domestic construction setting, this book goes on to cover a wide range of first-fixing operations prior to plastering and second-fixing operations after plastering. Each chapter covers the subject in great detail with step-by-step illustrations and text. Now in full colour, this edition has been updated throughout to take recent changes to the Building Regulations into account. The book is fully up to date with current industry best practice and technological developments, and a new chapter has been incorporated to address Sharpening Traditional Saws. The breadth of coverage and easily accessible 'how-to' approach makes this text an ideal resource for the 2000 apprentices per year taking NVQs and 1500 following Construction Awards within the Wood Occupations (City & Guilds / Construction skills). The technical detail and practical focus ensures that this book will be a vital purchase for these students, and an essential reference for any experienced carpenter or joiner.

This book provides critical, cutting-edge information related on all aspects of dealing with vehicle rescue and extrication. Covers in detail the best techniques for the delivery of state-of-the-art rescue and extrication procedures at real-world crash scenes. A new glossary of more than 2,500 extrication terms is included at the end of the book.

As climate change continues to wreak havoc on the environment, devastating wildfires, both natural and manmade, are increasing. The figure for average acres burned has increased from almost 2 million acres in 1992 to nearly 7 million in 2012, which set a new record with an average of 165 acres burned per fire. Things are heating up, but global warming isn't the only problem. Budgets for fire suppression have been slashed severely. The number of air tankers has decreased from 44 in 2002 to just 9 in 2012, which means fast attacks on fledgling fires will grow more difficult in the future. If you live in a wildland-urban interface, the zone between unoccupied and developed land, sooner or later fire will happen. Fortunately you can prepare for the worst, and it doesn't have to cost a fortune. This highly detailed and practical reference guide will help you live more safely in the red zone and save you time and money along the way, providing multiple methods of risk mitigation along with the financial level of each action. Effectively prepping your land can even enhance the scenery and increase the value of your home. Learn how wildfires begin and behave, how to evaluate your property, what essential tools you'll need and what they will cost, how to prepare your land and home--including tips on how to avoid insurance nightmares--when to stay and fight, when it's time to evacuate, how to clean up after a fire event, and more. Even if you live in the middle of a suburb, the information on how fires start and spread and how to deal with insurance claims will prove enlightening and helpful. No one can guarantee that your house or land will survive if a major conflagration erupts, but you can greatly improve your odds with this book and a little preparation.

American Woodworker magazine, A New Track Media publication, has been the premier publication for woodworkers all across America for 25 years. We are committed to providing woodworkers like you with the most accurate and up-to-date plans and information -- including new ideas, product and tool reviews, workshop tips and much, much more.
