Eventually, you will no question discover a extra experience and attainment by spending more cash. yet when? reach you endure that you require to acquire those every needs in imitation of having significantly cash? Why don't you attempt to acquire something basic in the beginning? That's something that will lead you to comprehend even more around the globe, experience, some places, similar to history, amusement, and a lot more?

It is your categorically own get older to play a role reviewing habit. among guides you could enjoy now is foundations of perfectoid spaces below.

Foundations of perfectoid spaces. Foundations of perfectoid spaces. (Notes for some talks in the Fargues-Fontaine curve study group at Harvard, Oct./Nov. 2017) Matthew Morrow (you can find me in office 539 in the Science Center) Abstract We give a reasonably detailed overview of the various tilting correspondences for perfectoid rings, the almost purity theorem, almost vanishing theorems, etc.

Foundations of perfectoid spaces - School of Mathematics

In mathematics, perfectoid spaces are adic spaces of special kind, which occur in the study of problems of "mixed characteristic", such as local fields of characteristic zero which have residue fields of characteristic prime p . A perfectoid field is a complete topological field K whose topology is induced by a nondiscrete valuation of rank 1, such that the Frobenius endomorphism is surjective on K° / p where K° denotes the ring of power-bounded elements. Perfectoid spaces may be used to ...

Now an adic perfectoid space is associated to a perfectoid adic K -algebra, which is a pair $(R; R_+)$, where R is a perfectoid K -algebra, and $R_+ \wedge R$ is open and integrally closed (and often $R_+ = R$). There is a natural way to form the tilt $(R^\flat; R_+^\flat)$. To such a pair $(R; R_+)$, Huber, [18], associates a space $X = \text{Spa}(R; R_+)$ of equivalence classes of

A perfectoid space is an object of CLVRS which is locally isomorphic to $\text{Spa}(A)$ with A a perfectoid ring. Note however that CLVRS is a full subcategory of the category $\text{PreValuedRingedSpace}$ of topological spaces equipped with a presheaf of topological rings and a valuation on each stalk, so the isomorphism can be checked in $\text{PreValuedRingedSpace}$ instead, which is what we do.

Using Huber's formalism of adic spaces and Scholze's formalism of perfectoid spaces, we globalize the constructions to give several descriptions of the étale local systems on analytic spaces over p -adic fields. One of these descriptions uses a relative version of the Fargues-Fontaine curve.

Download PDF Abstract: We introduce a certain class of so-called perfectoid rings and spaces, which give a natural framework for Faltings' almost purity theorem, and for which there is a natural tilting operation which exchanges characteristic 0 and characteristic p . We deduce the weight-monodromy conjecture in certain cases by reduction to equal characteristic.

About Me: I am a postdoctoral scholar at UC Berkeley as part of the Research Training Group in Arithmetic Geometry. My mathematical research lives at the intersection of algebraic geometry and number theory, and centers around nonarchimedean and rigid analytic geometry, with a particular emphasis on establishing the geometric foundations of perfectoid spaces.

This makes many results accessible over F , which are wide open over F of arithmetic interest such as \mathbb{Q} . The theory of perfectoid spaces was initially designed as a means of transporting information available over F to \mathbb{Q} , but has since found a number of independent applications.

Perfectoid Spaces and their Applications

Since their introduction just two years ago, perfectoid spaces have played a crucial role in a number of striking advances in arithmetic algebraic geometry: the proof of Deligne's weight-monodromy conjecture for complete intersections in toric varieties; the development of p -adic Hodge theory for rigid analytic spaces; a p -adic analogue of Riemann's classification of abelian varieties over the complex numbers; and the construction of Galois representations for torsion classes in the ...
