Overview: This lab is a supplement to the Radio Shack Electronics Learning Lab (28-280) Workbook 2, page 24. It is also a demonstration of the MSO-19 Oscilloscope and Logic Analyzer. NAND and NOR gates can be use to create a simple oscillator. In the exercise, we will build an oscillator out of two NOR gates and explore the pins. The circuit will be based on Radio Shack ' s Electronics Learning Lab (28-280) and the

Digital Logic may be initially difficult to comprehend and if you are seeking a book to simplify the understanding process, I would highly recommend this workbook by Forrest M. Mims III. The book begins with basic components, simple logic gates and proceeds to construct more complex logic in the process.

Try a search on: "Educational Electronics Kits For Students." You'll find things like the Learning Project Lab sets at RadioShack and other places, Electronic Snap Circuits (Elenco SC-300), and more. Ask some of the advertisers in Nuts & Volts! I'm sure I've seen similar electronics lab sets advertised here from time to time.

This introduction to circuit design is unusual in several respects. First, it offers not just explanations, but a full course. Each of the twenty-five sessions begins with a discussion of a particular sort of circuit followed by the chance to try it out and see how it actually behaves. Accordingly, students understand the circuit's operation in a way that is deeper and much more satisfying than the manipulation of formulas. Second, it describes circuits that more traditional engineering introductions would postpone: on the third day, we build a radio receiver; on the fifth day, we build an operational amplifier from an array of transistors. The digital half of the course centers on applying microcontrollers, but gives exposure to Verilog, a powerful Hardware Description Language. Third, it proceeds at a rapid pace but requires no prior knowledge of electronics. Students gain intuitive understanding through immersion in good circuit design.

"A hands-on primer for the new electronics enthusiast"--Cover.

The book features: carefully hand-drawn circuit illustrations hundreds of fully tested circuits tutorial on electronics basics tips on part substitutions, design modifications, and circuit operation All covering the following areas: Review of the Basics Digital Integrated Circuits MOS/CMOS Integrated Circuits TTL/LS Integrated Circuits Linear Integrated Circuits Index of Integrated Circuits Index of Circuit Applications

This book is evolved from the experience of the author who taught all lab courses in his three decades of teaching in various universities in India. The objective of this lab manual is to provide information to undergraduate students to practice experiments in electronics laboratories. This book covers 118 experiments for linear/analog integrated circuits lab, communication engineering lab, power electronics lab, microwave lab and optical communication lab. The experiments described in this book enable the students to learn: • Various analog integrated circuits and their functions • Analog and digital communication techniques • Power electronics circuits and their functions • Microwave equipment and components • Optical communication devices This book is intended for the B.Tech students of Electronics and Communication Engineering, Electrical and Electronics Engineering, Biomedical Electronics, Instrumentation and Control, Computer Science, and Applied Electronics. It is designed not only for engineering students, but can also be used by BSc/MSc (Physics) and Diploma students. KEY FEATURES • Contains aim, components and equipment required, theory, circuit diagram, pin-outs of active devices, design, tables, graphs, alternate circuits, and troubleshooting techniques for each experiment • Includes viva voce and examination questions with their answers • Provides exposure on various devices TARGET AUDIENCE • B.Tech (Electronics and Communication Engineering, Electrical and Electronics Engineering, Biomedical Electronics, Instrumentation and Control, Computer Science, and Applied Electronics) • BSc/MSc (Physics) • Diploma (Engineering)

Novel Algorithms and Techniques in Telecommunications and Networking includes a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the areas of Industrial Electronics, Technology and Automation, Telecommunications and Networking. Novel Algorithms and Techniques in Telecommunications and Networking includes selected papers from the conference proceedings of the International Conference on Telecommunications and Networking (TeNe 08) which was part of the International Joint Conferences on Computer, Information and Systems Sciences and Engineering (CISSE 2008).

From his unique vantage point as editor-in-chief of MAKE magazine, the hub of the newly invigorated do-it-yourself movement, Mark Frauenfelder takes readers on an inspiring and surprising tour of the vibrant world of DIY. The Internet has brought together large communities of people who share ideas, tips, and blueprints for making everything from unmanned aerial vehicles to pedal-powered iPhone chargers to an automatic cat feeder jury-rigged from a VCR. DIY is a direct reflection of our basic human desire to invent and improve, long suppressed by the availability of cheap, mass-produced products that have drowned us in bland convenience and cultivated our most wasteful habits. Frauenfelder spent a year trying a variety of offbeat projects such as keeping chickens and bees, tricking out his espresso machine, whittling wooden spoons, making guitars out of cigar boxes, and doing citizen science with his daughters in the garage. His whole family found that DIY helped them take control of their lives, offering a path that was simple, direct, and clear. Working with their hands and minds helped them feel more engaged with the world around them. Frauenfelder also reveals how DIY is changing our culture for the better. He profiles fascinating "alpha makers" leading various DIY movements and grills them for their best tips and insights. Beginning his journey with hands as smooth as those of a typical geek, Frauenfelder offers a unique perspective on how earning a few calluses can be far more rewarding and satisfying than another trip to the mall.

Have you ever wondered whether the forensic science you ' ve seen on TV is anything like the real thing? There ' s no better way to find out than to roll up your sleeves and do it yourself. This full-color book offers advice for setting up an inexpensive home lab, and includes more than 50 hands-on lab sessions that deal with forensic science experiments in biology, chemistry, and physics. You ' ll learn the practical skills and fundamental knowledge needed to pursue forensics as a lifelong hobby—or even a career. The forensic science procedures in this book are not merely educational, they ' re the real deal. Each chapter includes one or more lab sessions devoted to a particular topic. You ' ll find a complete list of equipment and chemicals you need for each session. Analyze soil, hair, and fibers Match glass and plastic specimens Develop latent fingerprints and reveal blood traces Conduct drug and toxicology tests Analyze gunshot and explosives residues Detect forgeries and fakes Analyze impressions, such as tool marks and footprints Match pollen and diatom samples Extract, isolate, and visualize DNA samples Through their company, The Home Scientist, LLC (thehomescientist.com/forensics), the authors also offer inexpensive custom kits that provide specialized equipment and supplies you ' ll need to complete the experiments. Add a microscope and some common household items and you ' re good to go.
