This unique guide provides a systematic overview of the idea of architectural space. Bryan Lawson provides an ideal introduction to the topic, breaking down the complex and abstract terms used by many design theoreticians when writing about architectural space. Instead, our everyday knowledge is reintroduced to the language of design. Design values of 'space' are challenged and informed to stimulate a new theoretical and practical approach to design. This book views architectural and urban spaces as psychological, social and partly cultural phenomena. They accommodate, separate, structure, facilitate, heighten and even celebrate human spatial behaviour.

This first monograph by New York-based Young Projects demonstrates a new approach to spatial design that embraces ambiguity at the intersections of form, type, and material. This monograph introduces the cutting-edge research and work of Young Projects, founded by Bryan Young, where materiality, structure, and form intersect to generate new architectural typologies. The book presents a selection of the practice's most relevant projects: five innovative houses completed between 2015 and 2020 as well as less in-depth looks at other projects that define the practice. Each house serves as a chapter through which Young Projects' broader body of work is explored across scales, illustrated through a rich landscape of drawings, diagrams,

renderings, mock-ups, prototypes, and photography. The through-line connecting all chapters is the studio's interest in using ambiguity and anomaly to create novel and accessible spaces, whether for high profile clients or a new resort in St. Kitts. Young Projects seeks to draw users into immersive spatial experiences that unfold over time, in a manner that is familiar but subtly foreign. This quality of "allure" is a result of a unique and experimental approach to materiality and spatial legibility. These are the threads that tie the work together and have set Young Projects apart as an emerging practice, as well as inform the larger-scale projects the studio undertakes as it enters its second decade. Young Projects' process often begins with simple exercises in making: form-

finding experiments they undertake within their Brooklyn studio. Material research has included hand-pulling plaster with an irregular knife, using furniture foam as a casting bed, and forming concrete with palm stems. These experiments, among many others, mine characteristics that are not typically associated with conventional architectural materials and break traditional methodology, allowing for qualities of randomness and spontaneity to enter the process of making. The studio finds that letting go of control (at the right moments) produces results that are often surprising, entirely bespoke, and resist replication.

systems approach to buildings, Integrated Buildings: The Systems Basis of Architecture details the practice of integration to bridge the gap between the design intentions and technical demands of building projects. Analytic methods are introduced that illustrate the value, benefit, and application of systems integration, as well as guidelines for selecting technical systems in the conceptual, schematic, and design development stages of projects. Landmark structures such as Eero Saarinen's John Deere Headquarters, Renzo Piano's Kansai International Airport, Glenn Murcutt's Magney House, and Richard Rogers's Lloyd's of London headquarters are presented as part of an extensive collection of case studies organized into seven categories: Laboratories Offices Pavilions Green

Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into a major international handbook of planning and design data. The second edition has been completely updated, with most chapters being totally rewritten, to meet the needs of the modern designer. The book contains nearly 50 chapters dealing with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each building type 'The Metric Handbook' gives the basic design requirements and all the principal dimensional data. Several chapters deal with general aspects of building such as materials, lighting, acoustics

and tropical design. There are also sections on general design data, including details of human dimensions and space requirements. It is a unique authoritative reference for solving everyday planning problems. In its various editions it has sold over 100,000 copies worldwide, and continues to be a reference work belonging on every design office desk or drawing board.

Written by the holder of several Guinness World Records for cardstacking, this is the first complete, fully illustrated guide to the art of building mind-boggling, multilevel structures with ordinary playing cards. In *Stacking the Deck*, Bryan Berg reveals the secret to successful cardstacking with his simple four-card-cell structure and expanded grid

techniques. Using illustrations and step-by-step instructions, he guides readers on to more elaborate -- and incredibly strong -- creations. He covers a wide range of architectural styles, from classic to whimsical, and various types of structures, including pyramids, shrines, stadiums, churches, an oil derrick, and even the Empire State Building. Since first setting the height record in 1992, Bryan's built awe-inspiring card models of a Japanese shrine, the Iowa State Capitol building, Ebbets Field, and his latest tower, which is more than twenty-five feet tall! This book includes photographs of some of these amazing pieces, illustrating just how appealing and enduring a "house of cards" can be. Stacking the Deck will inspire everyone from youngsters experimenting with their first deck of

Their songs insist that the arrival of the railroad and the appearance of the tiny depot often created such hope that it inspired the construction of the architectural extravaganzas that were the courthouses of the era. In these buildings the distorted myth of the Old South collided head-on with the equally deformed myth of the New South."
