Intelligent Systems involve a large class of systems which posses human-like capabilities such as learning, observation, perception, interpretation, reasoning under uncertainty, planning in known and unknown environments, decision making, and control action. The field of intelligent systems is actually a new interdisciplinary field which is the outcome of the interaction, cooperation and synergetic merging of classical fields such as system theory, control theory, artificial intelligence, information theory, operational research, soft computing, communications, linguistic theory, and others. Integrated intelligent decision and control systems involve three primary hierarchical levels, namely organization, coordination and execution levels. As we proceed from the be performed organization to the execution level, the precision about the jobs to increases and accordingly the intelligence required for these jobs decreases. This is in compliance with the principle of increasing precision with decreasing intelligence (IPOI) known from the management field and theoretically established by Saridis using information theory concepts. This book is concerned with intelligent systems and techniques and gives emphasis on the computational and processing issues. Control issues are not included here. The contributions of the book are presented in four parts as follows.

Gorillas using iPads, lemurs finger painting, squirrel monkeys popping bubbles . . . these primates are pretty smart! Could you make the grade in Primate School? Learn how diverse the primate family is, and some of the ways humans are teaching new skills to their primate cousins. Author Jennifer Keats Curtis is once again working with organizations across the country to share fun facts about primates through this photo journal.

Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

Summer vacation's up again, and everyone is looking forward to some quality time in the sun! But not all is hunky dory in the Sohma household, as Hatsuharu gets a relapse of 'black-ness' and starts tearing up the classroom like a bull in a china shop! Things also start to heat up when another member of the zodiac, the timid yet beautiful Ritsu, shows up at Shigure's house! But what strange monkey business is up with this kimono-loving beauty? Summer's just full of surprises, and one can only guess what the future holds!
